# Passive Optical LAN (POLs)

An alternative way to bring fiber to the desk is a passive fiber optic LAN (POL). A POL allows you to optimize your resources by installing a simple, secure and cost-effective all fiber LAN. By using a passive optical splitter in place of a workgroup switch, a POL provides benefits such as up front cost reductions, greater efficiencies, scalability and a clear upgrade path.

Legrand | Ortronics understands these advantages and provides a flexible, modular POL solution to deliver and create an end-to-end infrastructure.
