## **High performance**, uninterruptible service and energy efficiency.

The wide diffusion of UPS systems generally stems from an increasing dependence on electricity and the need to protect a range of equipment, data and processes that are crucial to companies. Power electronics is focused on the design and development of static UPS with increasing performance, which provide adequate energy saving along with lower environmental impact.

## Safety and uninterruptible service

Any electronic device that is not properly protected by UPS systems may be subject to disturbances from the mains supply. Electrical events such as voltage dips, black-outs, voltage surges, or other voltage or frequency anomalies, can generate serious consequences including:

- interruption of services
- loss of data and information
- faults or damage to the actual electronic devices.

The solution to these problems is provided by Uninterruptible Power Supplies (UPS) which, when installed between the power supply network and the equipment, **improve the quality of the power** by ensuring **uninterruptible service** and **protection** of all devices that perform functions that are critical to the business life of companies.

## **Energy efficiency**

Thanks to the use of the latest technologies, the new concept UPS boast high efficiency and an intelligent battery charging system that extends its useful life. In addition to significantly reducing UPS consumptions and operating costs, these features contribute to reducing the environmental impact of battery disposal.

legrand

## **LEGRAND IS A WORLD LEADER** IN THE MANUFACTURING OF ELECTRICAL EQUIPMENT,

and offers a wide range of solutions for the tertiary sector, that meet all system demands, from cabling systems for data networks, to channelling and distribution systems, to plant control and management.

Today, with a view to technological development that respects the environment and in order to face a constantly evolving market, Legrand proposes a new UPS range, a complementary offer of technological functions able to guarantee maximum protection for all systems.

**Legrand UPS** is currently the manufacturer with the highest growth rate on the market; it also recently received two major awards worldwide and was named Company of the Year and Company with the highest growth rate by Frost & Sullivan (an international market research and consulting firm).

These results have been achieved through a number of factors such as recent acquisitions, product development activity and, above all, growth in sales of products and services.

UPS CATALOGUE 5

# SUSTAINABILITY

## **Corporate Social Responsibility**

Green management and sustainable supply chain: these concepts are part of Legrand's Corporate Social Responsibility, which is the company's commitment to drawing up a strategy and implementing it with practical actions aimed at socially responsible behaviour towards everything around it, such as people, things and environment.

CSR involves the management of human resources, the organization and division of labour and the management of natural resources. CSR aims to assess the impact that the company's actions and decisions have internally, but also externally, on the stakeholders and the environment.

## Circular economy

We are committed to creating a system that involves all stakeholders to share values, objectives and actions in order to control and reduce the environmental impact of all our economic and production processes, reduce waste and environmental impact and transform what would once have been defined as «waste» into new resources.

Controlling these aspects has an impact on the entire life cycle of the product, starting from the design of new concepts and new specifications for the materials the UPS is made of; this is possible through responsible design and procurement processes (so-called «green procurement»), with a strong focus on research and the use of innovative materials from the circular economy and alternative raw materials. When a product ends its life, all these materials can become high value-added resources that can be used in other production cycles.

## Digitalization

New information technologies allow us to reduce the use of several paper documents in favor of the digital format: in this way the information is always and everywhere accessible from a PC or smartphone and at the same time we can avoid the felling of many trees. Digitization also becomes an important driver of the circular

economy, since it allows the use of tools for performance data analysis and preventive diagnostics, both useful for optimizing the life cycle and durability of the product.

or how Legrand engages with all of its employees and stakeholders.

#### **ENVIRONMENT**

or how Legrand intends to limit the Group's environmental impact.

## Efficiency

Our R&D team is constantly working on the development of increasingly efficient UPSs that allow high and incremental performance with minimum energy dissipation; with regard to CO<sub>2</sub> emissions, we are implementing processes and products that represent an improvement in the percentage of carbon footprint compared to the past. But efficiency is not only synonymous with high performance. For us, efficiency also means ecodesign: this implies that the UPS is designed to be easily repaired, maintained and it's easy to separate its components. This means increasing the durability of our UPSs and the possibility of reusing and recycling them at the end of their life.

## L'EPD/PEP

For each product range we draw up an EPD (Environmental Product Declaration) or PEP (Profil Environnemental Produit) in line with ISO 14025: it is a declaration that is a sort of environmental photograph of the product. The EPD is drawn up according to the concept of Life Cycle Assessment: it examines the environmental impact of a product throughout its life cycle, from the development of product specifications to the choice of materials to be used and the end-of-life destination of the product itself.

7

## **Distinguishing** characteristics

### High performance

The innovative design and high quality of the components used enable our UPS to achieve up to 96,5% efficiency, leading to significant energy savings.

#### Latest generation components

In-depth research on the best electronic components on the market combined with state-of-the-art manufacturing methods, make Legrand UPS extremely reliable and abreast of the times.

#### Environmentally sustainable products

Efficient UPS built with maximum attention to detail. Moreover, Legrand has developed an innovative testing system which reduces the energy consumed for each device manufactured.

#### Advanced technology

The On-line Double Conversion technology ensures a top quality power supply and maximum energy efficiency.

#### **Reliable electronics**

The optimum sizing of the power stages and thorough testing of each unit ensure excellent reliability.

#### High performance batteries

The batteries supplied with Legrand UPS are the best on the market. The innovative charging system significantly extends the life of the battery by up to 50%.

#### Services

Legrand provides a complete range of services to meet the demands of all its customers

## Range of **application**

Each type of UPS is characterised by different design properties, which means that the range is ideally suitable and usable in different environments, from domestic to tertiary and industrial sectors, and applications in specific fields.

**DOMESTIC APPLICATIONS** Video surveillance, home alarms, smart TV, Home Entertainment systems

**TRADE AND TERTIARY SECTORS** Offices, shops, points of sale

**HEALTH AND HOSPITALITY SECTORS** Hospitals, medical centres, hotels

INDUSTRIAL AND LARGE TERTIARY STRUCTURE SECTORS

Factories, warehouses, shopping centres

**TRANSPORT** Airports, rail and ship transport

DATA PROCESSING CENTRES Datacenter

**LEGRAND** offers a range of UPS products that are divided into 2 different types of products: **single-phase and three-phase**.

## **SINGLE-PHASE UPS**

#### The Legrand single-phase UPS range

is comprehensive and complete, with solutions that meet the demands of different application sectors, from domestic to tertiary.

The range is available from 25 W up to 10 kVA and is divided into 2 types of products:

- Consumer and Line interactive
- On-Line double conversion

## **Consumer and Line Interactive**

These are compact UPS, easy to install and configure and provide an excellent high quality/price ratio together with the guarantee of a long-term investment.

They are equipped with LED indicators that provide monitoring of the UPS status, whilst guaranteeing protection of the devices connected to the same.

The Line Interactive products are equipped with a filtering and stabilizing circuit (AVR: Automatic Voltage Regulator).

This version comprises:

Keor DC - Keor Multiplug - Keor SP - Niky S -Keor Line RT - Keor PDU.

## On-Line double conversion

These UPS use high frequency PWM technology, suitable for use in professional environments such as **IT application, offices, factories, shops and points of sale.** 

They are fitted with:

- DSP microprocessors for precise, constant control of all measurements and of the power factor correction circuit (PFC)
- Transformer-free technology electronics for high quality energy output with up to 96% efficiency.
- Hermetically-sealed, maintenance-free, valve regulated rechargeable batteries, lodged inside a designated section of the UPS or in one or more external cabinets.

The products that are part of this version are:

#### Keor LP- Daker DK Plus - Keor S.

#### **Keor LP**

UPS for low and medium power applications, available with different types of output sockets. All versions have a slot for connecting SNMP communication interfaces.

## **Keor DC**

It provides power to all domestic Internet-connected devices such as modems, routers, cordless phones, or VoIP. Output voltage can be selected.

#### THE CONSUMER AND LINE INTERACTIVE RANGE

#### Keor Multiplug - Keor SP -Niky S - Keor Line RT

These are line-interactive technology UPS that guarantee total and reliable protection for all Small-Office and Home-Office applications. They are supplied with electronic voltage regulator and telephone protection.

#### **Keor PDU**

It is specifically designed for installation in 19" panels and racks. IT is equipped with devices to protect against full battery discharge, overloads and short circuits.

## **Daker DK Plus**

With the reversible screen, the Daker DK Plus UPS can be used in both tower and 19" rack configuration.

Compact, robust and easy to move, Keor S is the perfect UPS to protect and supply loads in the industrial fields. Two different models are available as internal configuration; internal battery only or input isolation transformer with internal battery. Protection Degree IP31

Keor S from 3 to 10 kVA

## **C**legrand

#### Keor DC Single-phase DC

3 100 11

UPS designed to provide the continuity of operation in case of power failure to all Internet connected devices such as modem, router, cordless or VoIP phones.

Item	UPS		
	Nominal power (W)	Back-up time (min)	Type of power socket

Conventional UPS - Single phase On-line double conversion VFI

#### **Characteristics:**

- Characteristics: Single-phase UPS Power from 1 to 3 kVA VFI-SS-111 on-line double conversion RS232 communication port LAN / SNMP connectivity Uptime can be extended with additional battery cabinets Compact design and low footprint
- Compact design and low footprint

## **L7** legrand

#### Keor S

Conventional UPS - Single-phase On-line double conversion

3 101 21

3 107 41

#### Characteristics:

- 3kVA to 10 KVA Capacity Range 1 Phase Input / 1 Phase Output IGBT Inverter IGBT Rectifier
- High Efficiency
- -Digital Signal Processor (DSP
- \_ High Input Power Factor (PFC)
- High Output Power Factor
- Low Input and Output Total Harmonic Distortion (THD)
   Generator Compatible Operation
   Standard IP31 Protection for Industrial Applications
- -
- On Site Modular Paralleling Capability up to 4 Units (except 3kVA) Additional External Chargers for Long Back-Up Time Solutions (6-10kVA only) Availability of Different Communication Types -
- -
- User friendly diagnostic
- Advanced management and communication
   Integrated By-pass for maintenace
   LCD display with interactive menù

#### Item Single-phase UPS

# MODULAR UPS

Its continuous research combined with modern production methods has allowed Legrand to launch state-of-the-art modular UPS units on the market, with top ranking performances: efficiency certified up to 96,5% and unit power factor.

Thanks to the highperformance components and space-efficient structures, these products are the ideal solution for advanced energy management and cost containment.

The Legrand modular UPS units are high frequency PWM uninterruptible power supplies, On Line type with Double Conversion, modular architecture, and redundant N+X configuration option.

.25 to 10 kVA

They can be sized to meet the customer's needs, without precluding any future implementations. The products that are part of this version are:

Megaline - Trimod HE -Trimod MCS - Keor MOD

## HIGH performances HIGH efficiency RESPECT of the environment

#### CERTIFIED EFFICIENCY

The Legrand modular UPS guarantee exceptionally high efficiency values, up to 4% higher than the minimum values required by the European Code of Conduct (92%).

96,5%

## Increase in stand-by time and power

The different models are composed by STANDARD modules that can be added to existing UPS units to extend both power and backup time and guarantee maximum levels of redundancy.

#### Scalability of backup times

The expansion can be performed quickly and easily by adding battery drawers to the same cabinet, depending on the power of the UPS and the backup time requirements.

Single drawer with 5 9Ah batteries for Trimod HE and Trimod MCS.

Battery drawer for Keor MOD, designed to contain up to 24 9 or 11 Ah batteries.

#### Power and redundancy modules

The power modules are available in both single-phase and three-phase versions, depending on the power of the UPS. Both models guarantee low weight and overall dimensions along with top ranking performance.

Thanks to the construction technology the various redundancy levels can be set to always guarantee maximum service continuity.

Single phase power module for Trimod HE and Trimod MCS. Compact and lightweight (only 8.5 kg)

Three-phase power module for Keor MOD. Reaches a power output of 25 kW with just 2 rack units required

# **MODULAR UPS**

## High redundancy levels

#### Redundancy on single phase load

In a three-phase power supply system with single phase loads, if one of the modules fails, there is no loss of power as the power is distributed over the other modules that are still operational.

#### Phase redundancy

In a system with three-phase outputs, it is possible to create redundancy on each individual phase. If one of the power modules fails, the other modules for this phase take over from the faulty module.

## Control module redundancy

In UPS that include several control modules, the failure of one of the control modules results in the modules it controls being stopped. However continuity of service is assured by the automatic distribution of the lost power over the other modules.

## **[] legrand**®

#### EXCLUSIVE ROTATING TOUCH SCREEN DISPLAY

The Keor MOD has a 10" touch screen display provides a simplified control panel packed with information, alerts and settings and is also equipped with interactive icons to make navigation and selection of the functions to be controlled quick and simple. The possibility of being able to rotate the Display inwards by 180° simplifies and speeds up the configuration and maintenance phases.

The display is positioned vertically so you have both the operating block diagram and the UPS layout with all the available information all on the same screen.

## Decentralised bypass system

The decentralised bypass architecture reduces repair and maintenance time and costs. Each power module contains an indipendent bypass that, in the event of a failure, allows the remaining modules to simply to bypass mode, ensuring full functionality. The complete independence of the modules makes it possible to perform all maintenance and expansion phases in an extremely swift and simple way.

## Attention to design

The elegance of the design and the skilful choice of materials give the Legrand UPS units a sleek and cutting-edge look.

# MODULAR UPS

## **Megaline and Megaline Rack**

These are the only single-phase UPS units in the modular range. The single cabinet and 19" rack deliver a power of 1250 to 5000 VA and can house a maximum of 4 power modules and 4 battery kits. The range also includes double cabinets with a nominal power of up to 10000 VA. Further batteries can be housed in specific cabinets, and are easy to connect thanks to the backup extension fittings.

#### There are 3 versions available:

- SINGLE CABINET
- DOUBLE CABINET
- 19" RACK CABINET

#### Keor MOD -

It is an uninterruptible power supply based on three phase power modules, extremely compact and easy to handle. It delivers a nominal power from 25 to 250 kVA, it can be connected in parallel with other units up to 600 kVA.

Models up to 125 kVA have internal batteries for 5 minute backup time at 100% load.

Keor MOD integrates perfectly with the most critical applications such as Data Centers.

#### Trimod HE

It consists of individual redundant and self-configuring single phase modules and has a nominal power rating of 10 to 80 kVA. Thanks to the construction technology the various redundancy levels can be set to always guarantee maximum service continuity.

#### **Trimod MCS**

The Trimod MCS CPS (Central Power Supply) is a single phase and three-phase

centralised power supply system designed according to EN 50171 standards and represents the ideal solution for installation in buildings subject to fire safety standards and, specifically, to power emergency lighting systems. It can also be used to power emergency systems such as automatic fire extinguishing systems, emergency detection and alarm systems, smoke exhaust and carbon dioxide detection devices and specific safety systems in sensitive areas.

#### Megaline Modular single-phase double conversion UPS VFI

3 103 60 + 3 107 78

#### **Characteristics:**

- Modular single-phase UPS
   Power from 1250 to 10000 VA

- On-Line double conversion VFI-111
  Adaptable, expandable and redundant solutions in a single cabinet
  Swift and simple maintenance and management
  Low environmental impact (high efficiency and reduced footprint)
  Single or double cabinet UPS unit depending on the output power

- Single or double cabinet UPS unit depending on the output power
  Wide range of input voltage and frequency ranges
  Operating frequency of 50 60 Hz with self-recognition mode
  Frequency converter 50 in 60 out or vice versa
  Extension of the input frequency rate for operations with genset units
  Eco Mode operations (energy saving)
  Load waiting mode operations (protection on demand)
  Output voltage adjustable in 4 unit topic from the frequency papel

- Output voltage adjustable in 1 volt steps from the front control panel

- Very low noise level

- Internal and external temperature reader

Controls ventilation depending on the temperature and load

- Emergency remote shutdown option

NOTE: the stated backup times in minutes are estimated and may vary according to the load characteristics, operating conditions and environment.

#### Characteristics:

- Modular three-phase UPS
- Power from 1 to 80 kVA
- On-Line double conversion VFI-SS-111
- High efficiency up to 96%
- Output factor 1
- Adaptable, redundant and scalable solutions (IN/OUT 3-1 phase configuration)
- Quick and simple maintenance - Low environmental impact
- Diagnostics, monitoring, historical data and parameters that can be set
  - on the screen
- Reduced foot print and dimensions
- Taller cabinet to extend backup time and standard configurations
- Multi control board function
- Dual Input Function
- Hot Swap system
- Menu available in 7 languages Frequency converter in 40-70Hz out 50/60Hz (selectable)
- Operations with genset
- Three independent phase outputs
- Bypass line input
- Eco Mode
- EPS Mode

3 110 08

- Output voltage adjustable in 1 volt steps (190÷245V)
- Bypass speed regulation - Event log complete with date and time
- Global and historic data of each power module

CPS Modular three-phase double conversion VFI

3 109 90

3 110 02

- Characteristics: Modular single-phase and three-phase CPS Power from 3 to 80 kVA Conforms to EN-50171 Standards

- Conforms to EN-50171 Standards
  On-Line double conversion VFI-SS-111
  High efficiency up to 96%
  Output factor 1
  Adaptable, redundant and scalable solutions (IN/OUT 3-1 phase configuration)
  Quick and simple maintenance
  Low environmental impact
- Low environmental impact
- Diagnostics, monitoring, historical data and parameters that can be set Diagnostics, monitoring, motoriser sets and a provide sets and a provide set of the screen on the screen
  Reduced foot print and dimensions
  Taller cabinet to extend backup time and standard configurations
  Pre-configured solutions with 1h backup time
  Dual input function (Bypass line input)
  Let Swap system

- Hot Swap system
  Continuous operations at up to 120% of the load
  Protection against battery pole inversion
  Output configurable from the display as PERMANENT or NON PERMANENT
  Menu available in 7 languages
  Frequency converter in 40-70Hz out 50/60Hz (selectable)
  Operations with genset

- Three independent phase outputs
- Eco Mode

Item

- Bypass speed regulation
  Event log complete with date and time
  Global and historic data of each power module

UPS Modular three-phase double conversion VFI

3 104 80

#### Characteristics:

- Two cabinet types only (up to 124 kV and 250 kVA)
- Integrated backup for powers of up to 125 kVA UPS system capacity up to 600 kVA 10" touch screen with inward swivel option -
- \_
- Reduced battery charging times Double conversion efficiency over 96.8%. Efficiency in ECO mode up to 99% -
- \_
- \_ \_
- Output power factor up to 1 Modular redundancy in N+1 configuration. Noise controlled with intelligent fan management Multicoloured front LED bar \_
- \_
- \_
- Parallelable system with up to 24 modules Hot Swap and Plug and Play system -
- -Reduced battery charging times
- Decentralised bypass
- \_ Intelligence distributed between the modules

#### UPS - empty power cabinets

	Power (kVA)	Battery drawers socket-outlets	Distribution	Weight (kg)
3 104 80	25 - 125	from 2 to 5 battery drawers	3-3	256
3 104 81	25 - 250	-	3-3	233

#### Accessories

- 3 106 75 Output module 25 kVA
- **3 106 76** Kit of empty 6 battery block
- (to be used in sets of 4 per drawer)
- **3 106 77** Kit of 2 EMPTY battery drawers
- **3 106 78** Kit of 4 battery blocks (each 6 x 9 Ah batteries)
- **3 106 79** Kit of 4 battery blocks (each 6 x 11 Ah batteries)
- 3 109 62 Kit of 4 battery blocks (each 6x 9 Ah Long Life batteries
- 3 104 84 Modular battery cabinet
- 3 109 89 Full conventional battery cabinet\*
- **3 109 75** Parallel cable kit (1 kit for every 2 cabinets length 6m)

\* to be used in multiples of 2

NOTE: the stated backup times in minutes are estimated and may vary according to the load characteristics, operating conditions and environment.

For the choice of communication accessories, see the dedicated section of this catalogue.

# **CONVENTIONAL UPS**

The Legrand conventional UPS units range in power from 10 kVA to 4.8 MVA and feature double conversion on-line technology, latest generation micro processors for accurate and constant control of all measurements, and a power factor correction (PFC) circuit.

Transformer-free technology electronics for high quality energy output with up to 96.4% efficiency.

These uninterruptible power supplies are the result of an accurate combination of technology and design and deliver high performance, reliability and ease of use and maintenance.

The high efficiency and low environmental impact make them the ideal solution in various application fields, often characterised by critical conditions such as hospitals, industries, transport and the various tertiary sectors.

The products that are part of this version are:

from 600 kVA to 2.1 MV/

Keor Compact - Keor T Evo - Keor HP -Keor HPE - Keor XPE.

## 

#### THE PERFECT BALANCE BETWEEN **DIMENSIONS** AND **POWER**

The supplied internal batteries, with a capacity of up to 80 kVA, avoid additional costs for the purchase of external battery cabinets, help reduce the space occupied and simplify installation.

Range from 10 kVA to 4.8 MVA High efficiency - up to 96% Power factor =1

**0.32 m<sup>2</sup>** (30 kVA, 20')

**0.54 m<sup>2</sup>** (60 kVA, 14')

## **Excellent battery management**

The advanced battery charge and management functions improve performance and operating life over time.

## Front internal access

Legrand conventional UPS are designed to be installed and maintained from the front. All the manoeuvre switches and communication ports are installed on the front of the UPS. Ease of access to all parts subject to maintenance significantly reduces machine repair times.

INTERNAL BATTERY FIXTURES

## Parallelable system

It is possible to connect up to 6 identical power units in parallel depending on the power requirements. This achieves delivery of power levels of up to 4.8 MVA.

## Scalability

The parallel connections of up to 6 UPS makes it possible to achieve different degrees of redundancy and maximum levels of continuity of service and safety of the system itself.

It is a sturdy UPS unit, equipped with an internal isolation transformer making it suitable for use in high electrical disturbance environments. Its nominal powers of from 100 to 800 kVA makes it ideal for high power applications in tertiary, hospital, industry and transportation sectors.

## — Keor XPE

It is a complete scalable UPS system based on 250 or 300 kVA power units that can be combined with others to achieve the required power level (up to 2.1 MVA) or create redundant configurations.

Keor XPE It is the ideal solution for Data Center and high power applications.

The elegance of the design and the skilful choice of materials complete the performance and reliability features of this series of UPS units.

The new user-friendly and intuitive touch-screen displays and the hexagonal pattern, also seen in the ventilation grids, enhance the product, combining technology and design.

## Keor HPE –

Keor HPE is the perfect solution for critical medium and large power applications and is available from 60 to 500 kVA versions.

Boasting attention to design and a smart display, it includes advanced battery charging and management features that guarantee top battery performance and maximum operating life.

Its nominal powers of from 10 to 60 kVA provides a simple and compact solution for classic applications in tertiary, trade and industry sectors. Keor T Evo is scalable, parallelable and equipped with a display and multicoloured led bars that allow for swift UPS status checks.

## Meor Compact

With a rated power of 10-15-20 kVA, this is an easy-to-install UPS with wheels and colour touchscreen with user-friendly graphics and navigation windows. Thanks to its small dimensions, Keor Compact is ideal for installation even in small technical rooms. Parallel connections for redundant configurations make this UPS the perfect solution also for critical applications.

Conventional UPS - On-line three-phase double conversion VFI

Keor HP 100

Keor HP 400

- Characteristics: Power from 100 to 800 kVA Three-phase UPS Rectifier IGBT

- High efficiency

- High enticiency
   Digital signal processor (DSP)
   High Input Power Factor Correction
   High output Power Factor
   Battery recharge with temperature compensation
   Output isolation transformer
   Low input and output total harmonic distortion values (THD)
  Composite the sector
- Compatibility with gensets
  Parallelable system with up to 6 units
- Communication ports
- Optimised cooling system

#### **Options**

Description
Future Scalability
Hot Scalability
Input Line: Dual/Single
Connection Entrance: Bottom/Top
Connection Type: Cable/Busbar
Grounding System: TNC/TNS
Icw limitation kit
Battery set: Centralized/Distributed
Central or side IOBM
Special distribution kits for customised cabinet layouts
IP21 Kit

#### Accessories

Description
Battery cabinets
Battery switch fuse box
Synchronisation box
MODBUS RS485 card
Ethernet card with network interface

Please contact Legrand for further details on the configurations and accessories.

#### Characteristics

- On-Line Double Conversion VFI SS 111
- 3-level IGBT technology Transformer Free
   Output power factor = 1 without downgrading up to 40°C in continuous operation mode (VFI)
- Configurable internal redundancy (N + 1 or N + X).
- Hot maintainable modules
- Hot maintainable modules
  Hot scalability (optional)
  Up to 96,4% efficiency VFI even at low power
  ECO mode up to 99% of efficiency.
- Built-in backfeed protection
- Automatic battery test feature.
- Genset compatibility with Adaptive Ramp-in
- Compact design.
- Low audible noise.
- Synch 2N

## **Keor XPE** Scalable UPS - Online three-phase double conversion VFI

# BATTERY CABINET

For all three-phase UPS.

## Battery cabinet For all three-phase UPS

3 106 57 up to 20 batteries 105 Ah

3 109 82 up to 62 batteries 105 Ah

Universal battery cabinets for all three-phase Legrand UPS from 10kVA up to 800kVA power range. The Battery cabinet is designed to house standard VRLA Batteries of capacity range from 24Ah to 105Ah (C10). The battery cabinets are available in 5 different mechanical dimensions, are able to contain various combination of Batteries, up to maximum 63 blocks, connected in series and parallel, with positive, negative and middle point poles and with max DC voltage of 800Vdc.

## Item EMPTY BATTERY CABINET\*

\* in the cabinet are included Fuse Holder Switch and Fuses. Batteries not included

#### Characteristics

General characteristics	
Nominal Voltage	800 Vdc
Battery segregation	Internal panel in Polycarbonate
Switches and protection access	Internal bottom front side
Disconnection and protection devices *	Fuse Holders Switch with NH fast fuses (sized accordingly with Battery Power)
Fuse holder Open/Close signal*	Auxiliary Micro Switch
Cable Entrance	bottom sides (both left and right)
Cable connections	On Fuse holder terminals
Max Cable side entrance	3x 150mm <sup>2</sup>
Cabinet Access	Front door with key lock and removable sides and rear panels
Shelter Bent Metal Sheet Thickness	20/10
Shelves Bent Metal Sheet Thickness	30/10
Protection Degrees	IP20 (Optional IP21)
Colour	RAL 7016
Standard	IEC-EN 62040-1

## ACCESSORIES

#### management software

Model	Item	Software
		Description
UPS Communicator	down- loadable	Software consisting of a set of applications designed to continuously monitor the UPS unit operations and guarantee the integrity of the operating systems of the computers powered by the same UPS unit. Complete with agent for executing commands on remote computers (RS System).
UPS Management Software	3 108 79	Software consisting of a set of applications designed to continuously monitor the UPS unit operations and guarantee the integrity of the operating systems of the computers powered by the same UPS unit. To be completed with agent for executing commands on remote computers (RCCMD). 1 RCCMD licence included.
UPS Management Software	3 108 80	Software consisting of a set of applications designed to continuously monitor the UPS unit operations and guarantee the integrity of the operating systems of the computers powered by the same UPS unit. RS232/USB converter included. To be completed with agent for executing commands on remote computers (RCCMD). 1 RCCMD licence included.
RCCMD		Software that enables a computer to receive and execute, by means of a TCP/IP protocol, all remote commands transmitted by the UPS Management Software and any CS141 network interface. An RCCMD license is required for each controlled computer. Only the licences are supplied: the software is downloadable from the Internet.
RCCMD	3 108 85	Multi OS RCCMD licence
RCCMD	3 108 86	
RCCMD	3 108 87	Pack of 10 multi OS RCCMD licenses
RCCMD	3 108 88	Pack of 25 multi OS RCCMD licenses Pack of 50 multi OS RCCMD licenses
RCCMD		RCCMD licence for AS/400 (minimum release:
RCCMD	3 108 90	V5R3M0)
UNMS		A "WEB based" application which is able to continuously monitor the status of all UPS units via the UPS management systems and TCP/IP protocol.
UNMS		UNMS licence for 25 UPS
UNMS		UNMS licence for 50 UPS
UNMS	3 108 93	UNMS licence for 150 UPS

Examples of the types of management and communication that can be created using the software and hardware

#### Local protection

Protects one station only (PC or server) and must be installed at a distance of less than 12 metres (RS232) or 5 metres (USB).

#### UPS Management Software

#### Extended local protection

Protects multiple stations (PC or server) but all must be dependent on the COMPUTER that controls the UPS.

#### Extended local protection

Enables control of all the stations that can be managed by the UPS network interface. The coordination of the entire system can be monitored and controlled by each authorised user.

#### Centralised management

Using the UNMS supervision software, it is possible to control all the UPS connected to a TCP/IP network via any network interface that supports SNMP v1 or v2 protocols.

## **CUSTOMER SERVICES**

## Reliable

Directly present in more than 70 countries and servicing its products in more than 150 countries worldwide, a team of qualified engineers is available to support your UPS system to ensure power quality and availability to the most critical loads.

## Excellent

Legrand's competitive edge lies in its ability to provide high value-added UPS systems and services for both end users and business partners.

For Legrand, creating value means coming up with solutions for lower energy consumption, but also integrating product design into the overall development process. With around 200 000 catalogue items, the Group also provides all products required for electrical and digital building installations, particularly as integrated systems, finding solutions to fit everyone's needs.

## Tailor-made

Legrand offers a complete range of specific solutions and services to meet customer requirements:

- Technical pre-sales support at the project design stage
- Factory acceptance test
- Supervision of installation, testing and commissioning, site acceptance test
- Operator training
- Site audit
- Warranty extension
- Annual maintenance contract
- Fast intervention on emergency call
  - CUSTOMER SERVICES

UPS

# **CUSTOMER SERVICES**

## SUPPORT

#### SITE INSPECTION, INSTALLATION SUPERVISION.

We perform a comprehensive check of the UPS environment to ensure safety and fault-free operation. Our technical experts give manufacturer's recommendations to the site engineer or electrical contractors, and supervise the UPS installation before load power-up.

#### SITE TEST, COMMISSIONING.

Our Service Engineers conduct rigorous site tests and full setting-up of the UPS system before going live. They also perform site acceptance tests according to your requirements. Commissioning operations for all UPS are carried out by qualified engineers to guarantee seamless start-up. After the final handing over of the UPS system, a Test and Commissioning report is delivered to you.

## TRAINING

We offer on-site training to ensure your equipment's safe and efficient operation.

Troubleshooting courses are also available in our plants for intensive hands-on practice on UPS training equipment.

#### **PREVENTIVE MAINTENANCE**

Electronic equipment and power systems, such as UPS, contain life-limited components and parts that must be replaced according to the manufacturer's specifications. To ensure optimal performance and to protect your critical application from potential downtime, it is crucial to perform preventive maintenance operations on a regular basis and replace parts when needed. Our Service Contracts include cleaning, IR thermography, measurements, functional tests, event log and power quality analysis, battery health check, hardware and software upgrades, and technical reports. A Preventive Maintenance Plan is one of the most cost-effective actions that can preserve your initial investment and ensure your business continuity.

#### CORRECTIVE MAINTENANCE, EMERGENCY CALL

In the event of an Emergency Call, our worldwide service network, with engineers and spare-parts stocks strategically located as close as possible to your site, guarantees a fast intervention time with 24/7/365 assistance. After connecting his laptop to your UPS, very powerful diagnostic software helps our engineer to identify the fault, thus ensuring short MTTR (Mean Time To Repair). Corrective actions are performed such as part replacement, adjustments and upgrades to return the UPS system back to normal operation.
